The following is an examiner's statement of reasons for allowance:

Ihara et al disclose superconductors of the formula $\text{Cu}_{1-x}\text{Tl}_x\text{Ba}_2\text{Ca}_3\text{Cu}_4\text{O}_{12-y}$ having a T_c of 126 K (Abstract; experimental). The superconductors are specifically disclosed as overdoped (Results and Discussion section).

Usami et al (5,776,862) discloses oxide superconductor and process for preparing the same. Example 1 discloses the production of $(\text{Hg}_{1-x}\text{M}_x)\text{BaCaCuO}$ wherein M is Pb, Cd or Tl (Col 3, lines 5-40). Example 2 discloses the production of Hg,Pb/Ba/Ca/CuO having a high hole density and T_c of 130K (lower than highest value) (Col 3, lines 43-67).

As stated by applicant, the prior art superconductive materials are produced by a method different from the instantly disclosed/claimed methods. It is not an inherent certainty that the prior art materials possess the claimed "selective reduction type" properties.

The examiner makes of record that the phrase "preferably at 540°C" in instant claim 37 is merely an exemplary range.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
